

Initial Build Meeting Notes

Creative Director: Celina Xie

Designer: Annie Kim

General:

- Mobile view: wider line length for paragraphs
- Add footer to “Content” page and “Context” page (just the decorative line to indicate there’s a footer). Try adding a “Back to Top” button
- Mobile view: make the decoration lines underneath each page title shorter so that there is margin on the sides
- Hover state for the sun button of the navigation bar
- Give a selected state for “Content” and “Context” (darker yellow or orange color)
- If possible, try adding the page border from high-fidelity prototype; try adding one constellation decoration from mock up B and see if it feels okay. If it doesn’t just leave it out

Homepage:

- Remove the yellow card decoration from home page
- Make the title of homepage at the top, put sun icon underneath the decoration line (between title and introduction paragraph)
- Make the homepage’s “Major Arcana” and “Minor Arcana” into buttons in the style of the high-fidelity prototype, with a scroll-to when clicked on. Put these buttons on top of the two images
- Try making the two images have a hover state so that they grow a bit in scale when users hover over it, but no other interactive functions are needed

Contents page:

- Add in definitions of each Major Arcana card underneath the images. First line is Upright meaning, second line is Reversed meaning. It’s okay to just include 1-2 words for each of the “Upright meaning” and the “Reversed meaning”
- On the top of each section of the 4 decks of Minor Arcana cards, add in definitions of each deck in just one or two lines. (definitions can be copied from initial meeting notes) Have margin-top or padding-top so that the definitions would act as a dividing line between two decks
- Desktop view: use 2 columns for Major Arcana cards (so it’d be 11 rows for 22 cards total), make each image a bit bigger (more width than they are now, so that there’s more room to fit the definitions). Minor Arcana works well now in 4/row
- Mobile view: 2 columns for both Major and Minor

Contexts page:

- Change paragraphs from center align to left align but remaining centered on the page
- Add the decorative sun icon from the homepage (underneath title) to the context page between each section, so that they feel like section breaks. These will be decorative with no actual functions
